DATE: February 18, 1970

FROM: Al Suhre, Maintenance Superintendent

SUBJECT: Water Treatment

We have a rather good system of water analysis, however, I am a bit uneasy about the results.

At present samples are taken from boilers, heat exchangers, cooling towers and etc., and delivered to the Laboratory where tests are made and recommended treatment is sent to Maintenance.

I would like to improve on our present method by having the supplier of our compounds make a monthly check to see whether we are obtaining proper results.

This service is free from most vendors, and if our present supplier does not perform this service we should investigate other areas.

We have encountered problems with scale in boilers, water jackets and the like, and the proper water treatment well controlled will reduce this problem radically.
